Fact-Bite

The SEC is planning a phased implementation. Larger organizations would have to comply with the regulation by 2023, while smaller ones would have time until 2024 to follow. The SEC knows that certain parts of the regulation are a great challenge for many listed companies, especially when reporting scope 3 emissions. That's why their current proposal does not oblige companies to calculate their scope 3 emissions by Greenhouse Gas Protocol (GHG) standards. Instead, companies are asked to choose a methodology that fits their portfolio and financing activities best. The methodology must be part of the filing.
